**DETAILED ACTION**

1. This office action is in response to communication filed on 12/9/2010.
2. Claims 34, 36-37, 39-41, 43-44, 46-48, 50-51, 53-54 are presented for examination.

**Claim Rejections - 35 USC § 103**

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claims 34, 36-37, 39-41, 46-48, 50-51 and 53-54 are rejected under 35 U.S.C. 103(a) as being unpatentable over Nakamura (5,987,424 hereinafter Nakamura) in view of Kenney (5,515,424 hereinafter Kenney) further in view of Gupta (5,206,899 hereinafter Gupta).

With respect to claims 34,36-37, 39-41, 43-44, 46-48, 50-51, 53-54 Nakamura teaches a communication terminal (i.e. subscriber telephone set 1); a registration request issuing means for issuing a registration request for advertisement information broadcast from an advertisement information broadcast server and receiving means for receiving advertisement information which is broadcast from said advertisement information broadcast server, based on said registration request (i.e. the telephone set under contract to receive messages)(steps 1301 and 1302); and a display means for displaying said advertisement information received by said receiving means (Figure 14).

With respect to said display means for automatically displaying said advertisement information on a standby screen when the communication terminal is in standby state. Kenney teaches "the monitor 18 would **display informational screens for a period of 8-10 seconds each when the phone is not in use**. These still images are stored in a memory module 38, which could be a disk drive, in the phone. In some cases, the data could be downloaded from a central administration point" (col. 4, lines 27-32). It would have been obvious to a person of ordinary skill in the art at the time of Applicant's invention to have included automatically receiving advertisement information on a standby screen because such a modification would without any human interaction attract passerby to the telephone terminals.

With respect to the communication terminal being portable. Official Notice is taken that it is old and well known for devices or the like to be portable in order to provide portability. It would have been obvious to a person of ordinary skill in the art at the time of Applicant's invention to have included the communication terminal being portable in order to obtain the above mentioned advantage.

Nakamura further teaches a registration cancellation means for requesting to stop broadcasting said advertisement information from said advertisement broadcast server (i.e. detecting subscriber termination/rejection of advertisements)(step 1303) and a registration cancellation means for requesting to stop broadcasting said advertisement information from said advertisement information broadcast server (i.e. exchange 4 determining if a cancellation request was received from the subscriber telephone set 1)(col. 24, lines 29-33).

With respect to the newly amended feature, Nakamura doesn't teach immediately register and immediately canceling registration of the portable terminal. Gupta teaches on col. 6, lines 44-47; col. 7, lines 55-58 and col. 8, lines 7-12 teaches using a mobile phone or a public phone and **"service will be activated immediately and remain activated until subsequently canceled"** (col. 6, lines 44-47) and cancellation is done immediately via a **"deactivation call"** (col. 8, lines 7-12). It would have been obvious to a person of ordinary skill in the art at the time of Applicant's invention to have modified Nakamura's portable terminal to have included the teachings of Gupta of immediately register and immediately canceling registration of the portable terminal because such a modification would **provide a service by which a subscriber can, from any location, easily, quickly and on a real-time basis, personalize and/or change certain characteristics** (in Gupta col. 1, lines 5-13)

**Response to Arguments**

5. Applicant's arguments with respect to claims 34, 36-37, 39-41, 43-44, 46-48, 50-51, 53-54 have been considered but are moot in view of the new ground(s) of rejection.
